### Explanatory notes

The tables in this section reflect the investigation criteria and response times operated by the City Council. These are dictated by the City Council's Risk Register which assesses the impact of any defect against the likelihood of danger arising from it. This allows the Council to prioritise the spending of available funds effectively.

Highways Services comprise highway maintenance services and highway lighting services.

### Highway Maintenance Service

This includes maintenance falling within the following description:

- **Reactive:** responding to inspections, complaints or emergencies
- **Routine:** regular consistent schedule for patching, cleaning, landscape maintenance and other activities
- **Programmed:** planned schemes, primarily of resurfacing, reconditioning or reconstruction
- **Regulatory:** inspecting and regulating the activities of others

### Reactive Maintenance

The requirement for reactive maintenance can arise in one of two ways:

1. A customer calls the Environment Action Line and reports a carriageway or footway defect. Enquiries are logged and directed through the Highway Maintenance software (Confirm) to the Service Providers. Urgent enquiries are attended within 2 hours of the enquiry. Non urgent enquiries are inspected by the Road Management team and a job is raised with our Service Provider if required.
2. A Road Management Inspector finds a defect during a programmed inspection (every publicly-maintained highway is inspected six monthly, quarterly or once a month depending on priority) and orders the work.

Calls to the Service Provider are prioritised by the Highway Helpline staff based on criteria provided by the city council's Highways and Public Realm service. The action taken depends on the criteria below:

**Category 1 defects** (response in or under 24 hours) - these are defects which are deemed to represent an immediate danger to the public or which could result in significant damage to property. Category 1 defects are sub-divided into:

- Priority 1 2 hours to make safe
- Priority 2 24 hours to make safe or repair

**Category 2 defects** (response in excess of 24 hours) - these are defects which have a lower risk and are likely to worsen in the near future to a Category 1 defect.

Category 2 defects are sub-divided into:

- Priority 3 7/10 days to repair
- Priority 4 28 days to repair
- Priority 5 Repair during the next available programme, or schedule more detailed inspection, or review condition at next inspection (subject to budget)

Routine Maintenance

Routine maintenance includes:

- drainage systems- cleansing and repair
- fences and barriers - repair
- traffic signs and bollards - cleansing and repair
- road markings and road studs - replacement
- non-illuminated street furniture- clean and paint
- benches - clean and varnish

The frequency of routine maintenance is dependent on funding but aims to achieve the standards set out in the table below.

Routine Maintenance Activities		Service Level
Work		
Road Markings (Highways) - Repaint / Refresh	4-yearly	4-yearly
Road Markings (Highways) - Replacement	4-yearly	12-yearly
Road Markings (Parking)		<u>Yellow Lines</u> Zone E, F, G- refresh every year Zones A, B, C, D, H -once every 3 years <u>Bay Markings</u>

Routine Maintenance Activities	
Work	Service Level
	Zones E, F, G- refresh every year Zones A, B, C, D, H - once every 3 years <u>Kerb Blips</u> Refresh all 3 x times a year
Cleaning and painting of street furniture (pedestrian guard rails, barriers, signs, bollards and benches)	Benches -Annual clean and re-paint Other street furniture- 4-yearly clean and re paint
Maintenance of gates	Annual maintenance. Re-painting: every 3rd year
Flags and flagpoles	Three times a year wash and clean (every four months)
Drainage	<ol style="list-style-type: none"> <li>1. A minimum annual routine visit to each and every gully or drainage asset</li> <li>2. An agreed, evaluated and appraised intelligence based targeted maintenance gully programme based upon a risk management approach. Gully cleaning at a higher frequency to 'critical locations' and a lower frequency to other locations based upon priority and risk.</li> </ol>

#### Programmed Maintenance

It is not possible to set standards for when carriageway and footway resurfacing will be undertaken as the inclusion of a scheme in the approved programme will depend on its assessed priority and on the budget available.

The City Council has adopted a Value Management process to determine which areas of footway and carriageway are to be included in the annual capital programme. This process starts in the summer of each year when an Annual Condition Survey (ACS) is carried out based on industry agreed practice. The survey results in a Condition Index (CI) for every footway and carriageway. A high CI means the surface is in poor condition and vice versa.

In addition to the ACS survey results, the Value Management process takes into consideration a range of factors e.g. Visual Appearance, Customer Reports and Maintenance History when deciding how to spend the budget.

The programme of schemes is subject to a Cabinet Member decision and is published on the council's website. The list of ACS survey scores, Value Management scores and provisional programme of works is typically published in April each year.

#### Regulatory work

This includes:

- keeping a highway register
- management of utilities- utility companies are obliged to meet the minimum standards set out in the Code of Practice published under the New Roads and Street Works Act 1991
- licenses for highway occupation
- other regulatory functions - encroachment, illegal signs, etc

#### Highway Lighting Service

This includes reactive maintenance, routine maintenance and a renewal and improvement programme of the stock of electrical/lit traffic signs and public lighting.

#### Reactive Maintenance

The system for reactive maintenance rectifies defects identified from inspections, other reports or complaints, which include the following:

- lamp change
- control gear replacement
- lantern (or part) replacement
- operational control system, (PECU, Timeclock, Remote Monitoring unit)
- circuit protection replacement / upgrade as required
- internal wiring
- doors and door locks
- paint and number as required
- safety check for electrical and structural issues
- electrical service / connections
- fitting of fault plates
- all good housekeeping work (e.g. -greasing locks, aligning sign plates, refixing doors etc)

### Routine Maintenance

The system of routine preventative maintenance includes:

- clean and check
- cyclical lamp change as required
- cyclical painting as required
- cyclical structural testing as required
- cyclical electrical testing as required
- assessment of asset condition
- all good housekeeping work (e.g. -greasing locks, aligning sign plates, refixing doors etc)
- identify any items that represent a significant deterioration from the required condition preventing an item from acting in the intended manner that maybe the result of damage or that may be likely to increase the rate of deterioration of another item or cause an unintended hazard or nuisance.

### Responding to Defects

Defects identified through reactive and routine maintenance checks categorised and rectified according to the standards summarised below.

**Category 1** defects are those, which require prompt attention because they represent an immediate or imminent risk to safety (2 hours).

**Category 2** defects are all other defects (2 -10 working days).

Where the fault rests with the Network Operator supply, this can take up to 40 days.

### Renewal and Improvements

It is not possible to set standards for when public lighting will be renewed or improved as the inclusion of a scheme in the approved programme will depend on its assessed priority and on the budget available.

Schemes are identified using the Value Management process adopted for lighting, which reviews the structural and electrical condition of street lights across the City, and by taking into account other factors such as lighting standards, crime levels and maintenance records.

The programme of schemes is subject to a Cabinet Member decision and is published on the council's website. A list of provisional programmes of works is typically published in April each year.

### Highways Inspections

Streets are inspected weekly. These "wall-to-wall" inspections are carried out on foot by dedicated lighting scouts with any defects found logged through live handheld devices.

### **Section 3 Neighbourhood problem solving and community engagement services**

#### **Neighbourhood Working**

The city is divided into three strategic areas to deliver a more integrated neighbourhood model way of working. These areas contain a wider range of multi-disciplinary officers, allowing for a holistic approach to the management of the neighbourhood, and focus on local and strategic priorities. Each area is managed by a Head of Service overseeing governance and management arrangements and NWECC is covered by the Central Area.

The areas are divided into three smaller neighbourhood areas and each of these areas in turn are covered by a multidisciplinary team of officers including City Inspectors, EHOs and Neighbourhood coordinators (formally Neighbourhood Problem Solving Coordinators) who work with stakeholders, other services and partners to develop sustainable solutions and deliver against local priorities.

#### **Integrated Street Engagement Unit (ISEU)**

The unit brings together council resources of dedicated City Inspectors and a Neighbourhood Coordinator with local Police Teams and externally commissioned services, such as outreach, mental health, and substance misuse services. These teams work together in a formal partnership structure to tackle challenges associated with Westminster's street population such as begging, open drug-taking and other street-based anti-social behaviour.

The team works closely and in parallel with key members of the Rough Sleeping and Public Health teams. Further support and expertise is provided by a range of key personnel from across the council and partner organisations.

## **Section 3**

### **Neighbourhood Problem Solving and Community Engagement Services**

#### **1 NEIGHBOURHOOD WORKING**

The city is divided into three strategic areas to deliver a more integrated neighbourhood model way of working. These areas contain a wider range of multi-disciplinary officers, allowing for a holistic approach to the management of the neighbourhood, and focus on local and strategic priorities. Each area is managed by a Head of Service overseeing governance and management arrangements and HOLBA is covered by the Central Area.

The areas are divided into three smaller neighbourhood areas and each of these areas in turn are covered by a multidisciplinary team of officers including City Inspectors, EHOs and Neighbourhood coordinators who work with stakeholders, other services and partners to develop sustainable solutions and deliver against local priorities.

#### **2 Integrated Street Engagement Unit (ISEU)**

The unit brings together council resources of dedicated City Inspectors and a Neighbourhood Coordinator with local Police Teams and externally commissioned services, such as outreach, mental health, and substance misuse services. These teams work together in a formal partnership structure to tackle challenges associated with Westminster's street population such as begging, open drug-taking and other street-based anti-social behaviour.

The team works closely and in parallel with key members of the Rough Sleeping and Public Health teams. Further support and expertise is provided by a range of key personnel from across the council and partner organisations.
